On own terms

The name ESG is standing for service and precision in stainless steel. We are specialized in slit strip of various qualities and executions. In the course of years, we have gained a continuously growing experience in this field and are renowned as an efficient service partner for the stainless steel processing industry.

Thanks to our flexible service center including a wide stock range and diversified delivery program we are ranking among the leading companies in our field.

Experience, ideas, quality

The confidence in our company is resulting from the good reputation of our products. Our permanent highly skilled staff makes sure that experiences and knowledge gained in production are steadily increased. Quality is also based on experience.

The focus is our customer. This principle is also the main source for the quality of our services, i.e. qualified technical consult for choosing the appropriate steel quality or for steel processing.

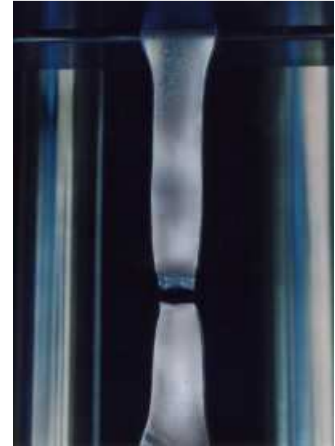

The basis for our optimized production control is our efficient data processing system. Readiness for delivery and flexibility guaranteed.

Strict quality control is warranting the high technical standard of our products. They are subject to continuous checks at all steps of production. Our production is supervised manually, mechanically and electronically. Guarantee that ESG-quality is not a matter of chance but due to permanent control. ESG is certified according to DIN EN ISO 9001 : 2000.

Service in stainless steel

Precision starts already with picking out the appropriate steel quality. In our well-assorted stock we are continuously keeping available large quantities of stainless steel coils in many sizes, finishes and qualities. Carefully tested. Raw material for a vast field of processings and applications, for service made to order. We are adapted to just-in-time deliveries.

Range of products

Precision slit strip

True to size according to your demands

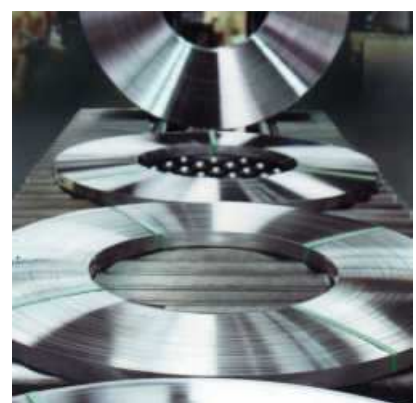

Ultra-modern production and years of experience guarantee that we deliver high-grade slit strip for standardized efficient processing, slit with low burr, small edge deviation, recoiled tightly edge on edge, in thicknesses starting from 0,10 mm and widths from 4 mm, with various coil inner diameters, coil weights and special tolerances, in many qualities and finishes.

We also cut most extreme dimensions, i.e. 5,0 x 20 mm, deliver apart from commercial standard finishes also coils in grinded, brushed and/or foil coated execution for decoration purposes and warrant most different conditions such as best side of the coil inside, little cross camber or slit burr opposite the foil.

Edge working by ESG

Clean cut, true to size

Edges slit with low burr are sometimes not enough. Therefore, we have specialized on burr-free, pressed, roll-rounded, on-edge rolled and tool-rounded edges with various radii depending on type of edge and end use.

Cold reduction

The high art of steel shaping

We do not run a typical cold rolling mill in its original sense but we are proud of the precision of our cold reduced products. We are rolling with extremely tight gauge tolerances of $\pm 0,02$ mm for finished thicknesses up to 3,00 mm with end widths up to 130 mm depending on the strip input gauge. The carefully selected prematerial as well as high-precision rolling guarantee tight strength range and high accuracy to size on the whole length and width of the strip.

Depending on the steel type and finished thickness we deliver stain-hardened stainless steel strip up to a tensile strength of 2000 N/mm², specialities for particular applications.

Bars cut from precision slit strip

With edges cut, deburred, roll-rounded, on-edge rolled or tool-rounded: an alternative to conventional hot rolled flat bars.

Precision on bars

In widths of 10 – 120 mm
Thickness range 1,0 – 5,0 mm
in lengths up to 6500 mm
reliable linear straightness, tightest tolerances,
smooth surfaces, carefully packed.

Our flexibility in length, width, gauge and also higher degrees of strength saves you additional cost and long delivery time.
